Verify, Access and Defend With Cisco Secure Remote Worker

Jeff just started working remotely full-time. Because his employer uses Cisco Secure Remote Worker solutions, he can work from home with the confidence that he's always protected.

He uses a simple MFA (multi-factor authentication) to verify his identity and quickly access apps and work files, and a security check ensures his laptop is healthy and up to date.

Next, he uses a VPN (virtual private network) that encrypts his IP address and makes him "invisible" to outside threats as he accesses the company network.

As he works, both a first and last line of defense defends his data from any kind of malicious threat– blocking, detecting and remediating issues.

Cisco Secure Remote Worker is a simple, effective and integrated security offering that makes it easy for remote workers to stay connected and productive when they're away from the office.

It's built on a single platform of integrated solutions that protects users everywhere and helps businesses of all sizes secure their workforce, fast.

We help defend businesses of all sizes every day, whether they're on or off network.
