# Medium Collaboration Room – Dual Screen

## Overview and Intent

This document provides guidance on how to effectively design a medium collaboration room.\*

This design brings space layout, technology and furnishings together to create an optimal experience for those present locally and for remote attendees.

Each customer project is unique. Thus, it is important to involve local facilities teams, workplace design resources, architects and space designers, IT and a Cisco-certified integrator. The collective goal is to finalise the details of any design, verify the applicability and address any local concerns – electrical/mechanical, orientation and location of the room within the floor plan, accessibility, circulation – and external factors such as noise, light and temperature.

*\* All illustrations are provided for information purposes only. Final plans may vary.*

## Room Description

The perfect space to bring people together for knowledge sharing or decision making, optimally seating 8–9 individuals. When dual 55” displays are used, you see content and remote participants simultaneously.

### Supported Collaboration Activities

Information Sharing ✓

Brainstorming

Team Building

Decision Making ✓

# Video Device Mounting Options

There are two mounting options for the video device in the medium collaboration room, directly on the wall or leveraging an A/V compatible credenza. Several factors will go into determining which option is best.

## Option 1: Wall Mount

Wall Mounted – Requires wall to be blocked and electrical and data to be elevated.” Specific wall mount hardware must be determined based on the weight of the displays that are selected.

## Option 2: Credenza Option

A/V compatible credenza – Free-standing and fully integrated cabinets available from a number of specialised vendors eliminate the requirement for the wall to be blocked and electrical moved. Perfect for new and retrofit installations, allowing for quick and efficient installation.

# Power and Data

## General Specifications

Power/data requirements need to be verified for each project. Provide video device power/data even if project plan does not include it day one. Based on the design of this space, core drills and floor boxes will be required.

## Power and Data

Provide two (2) data jacks and dual plugs on wall behind video device. Provide a minimum of two (2) data jacks on floor under the table; if table-top data is required quantity will increase.

## Power in Tabletop

User power should be surface mounted in tabletop. If pop-ups or table wells are used it is important to verify that they can accommodate all laptop power supplies. Provide shared power – 1 power port for every two seats.

# Exploded IT Diagram

## Medium Collaboration Room

Occupancy sensing for space/room booking insights and energy optimisation for sustainability goals

Automated POE lighting for LEED and sustainability goals

Consideration: USBC charging and convinience outlets on the tabletop for occupant convenience

Wireless sharing for ease of collaboration

## Medium Collaboration Room

### Cisco Products

- CS-KITPLUS-K9 Cisco WebEx Room Kit Plus
- CS-MIC-TABLE-J add on qty 2 tabletop Mic
- CS-T10-WM-K9 Cisco Webex Room Navigator – Wall Mount version

### IOT Devices

- IAQ coming from the Webex Room Navigator, No additional IoT IAQ
- Occupancy sensing is coming from the Webex Endpoints and IoT sensor
- Suggested lighting specifications: 220LPW raw, 140LPW delivered
- Each Medium Collaboration room POE lights being powered by 4 ports on the ceiling
- Traditional DC Wall Switch
- No ASHRARE 90.1 outlets
- No individual HVAC control in the space

### Non-Cisco peripherals

- Dual 55” Video Displays

### External microphones and speakers

- Mic and speakers are embedded in the Webex Endpoints, No additional mic or speakers required

# Commisioning-User Acceptance Testing (UAT) Criteria

## Medium Collaboration Room

### End User Journeys to be covered under UAT for this space

- ☐ Internet connectivity of Webex device
- ☐ Initiate test calls via Webex Room Navigator – table version and via Webex Assistant voice commands
- ☐ Table top power and data functionality
- ☐ Check for proper facial illumination
- ☐ Validate noise readings are being read from endpoint
- ☐ Validate noise readings are being displayed on Room Navigator and/or endpoint
- ☐ If applicable, verify Webex Room Navigator – Wall Version is operational, not limited to displaying calendar booking information and being able to book room (if configured).
